Physical Activity, Chronic Diseases & Parks and Recreation

Regular physical activity is essential for healthy aging, and provides substantial benefits to the mental, social and physical wellbeing of older adults. Older Adults need at least 150 minutes of moderate-intensity or 75 minutes of vigorous-intensity, aerobic activity such as walking, biking or swimming each week.

Four out of five (70 million) older adults 50 years and older in America suffer from one or more chronic conditions such as arthritis, diabetes and heart disease. However, the availability of evidence-based physical activity interventions at local park and recreation agencies that allow older adults to socialize and engage in physical activity is one important way to help them manage their conditions, maintain functional independence, and remain vital contributors to their communities.

NRPA, through support from the CDC, is partnering with local park and recreation agencies across the United States to increase the availability and reach of evidence-based physical activity programs such as Walk With Ease. Active Living Every Day, and Fit & Strong! These programs are suitable for people with or without chronic conditions.

To date, 152 local park and recreation agencies across 45 states and American Samoa have implemented these physical activity programs in their communities. Program instructors enjoy offering the classes and participants have benefitted tremendously.

Partner and Participant Feedback

“The Walk With Ease Program has had an impactful benefit to the community of Spearfish. We have been able to make a real connection with community members, in turn helping them learn and grow to a greater extent.”

- Spearfish Recreation and Aquatics Center, SD

“Walking has increased my mobility. I can walk to the corner store and do things for myself and this way I’m not an unnecessary burden to my family and friends.”

- 79 year old Walk With Ease participant, AZ
